

Gorazd Žibert:

NAČRTOVANJE IN GOSPODARJENJE Z VODAMI - VODNO IN GOZDNO GOSPODARSTVO NA POVODJU KOKRE

Mentor: prof.dr. Franci Steinman
Somentor: doc.dr. Primož Banovec
Oddano: januar 2005

Povzetek

V seminarski nalogi sem predstavil načrtovanje in gospodarjenje z vodami, s stališča vodnega in gozdnega gospodarstva. Obe področji sta podrobno opredeljeni, zaradi lažjega obravnavanja in primerjanja obeh panog. Opredeljeni sta s stališča mednarodnih obveznosti, zakonodaje, osnovnih pojmov in organiziranosti. Zaradi lažjega primerjanja je njuna primerjava narejena na konkretnem primeru, na povodju Kokre. Povodje je natančno opisano s stališča naravnih danosti in osnovnih dejavnosti. Primerjava prikazuje sodelovanje in (ne)skladnost gozdnega in vodnega gospodarstva. Tako je primer vodovarstvenih pasov primer sodelovanja med obema sektorjema, medtem ko je vodna drevnina primer neurejenih razmer z vidika obeh panog.

Ključne besede: vodno gospodarstvo, gozdno gospodarstvo, povodje Kokre, vodovarstvena območja, obvodna drevnina

Abstract

The seminar paper introduces water planning and its management from the viewpoint and forest managements. Both fields are described in detail due to its easier treatment and comparison. The description is based on international liabilities, legislation, basic notions and organisation. To make it more understandable their comparison is based on an actual example, namely the River Kokra. The watershed is specified by its naturalness and basic activities. The comparison shows cooperation and contrast between forest and water managements. The cooperation of both fields is shown by water-protective areas while wooded areas near rivers show disordered of both fields.

Key words: water management, forest management, the watershed of the River Kokra, water-protective areas, wooded areas near rivers
